

Workshop

Preservation is sustainability
Let's fix good roads!

A seminar that looks at how highways asset management has evolved, how we can embrace new technology and challenge the way that we treat roads over their lifecycle.

WEDNESDAY 8 JANUARY 2020

9.30 - 3.30pm

The York House Hotel
10 Drury Lane, Wakefield, WF1 2TE

Over the last ten years, all local authorities have had the challenge of developing long term asset management plans whilst dealing with all the funding uncertainty that austerity measures have brought.

Over the same period, the rise in expectation from road users has added to the pressure to act quickly with often limited resources.

There is an increasing debate about 'smart cities', 'smart infrastructure', digital services but what actually is the meaning of 'smart' in the context of highways asset management?

Gaist & ASI are holding a seminar/workshop to discuss how highways asset management has evolved over this period and how innovative new road surface preservation treatments are playing an integral part in the whole of life plan for road networks. In addition, the seminar will look at the ongoing digital transformation of highways asset management practices and how this is bringing huge benefits around the world, including radically new methods for safety inspections.

There will be an opportunity to discuss the use of 'smart' technologies and data which can identify where new surface treatments can be used to significantly extend the life of a network in the most cost-effective way.

WORKSHOP TOPICS

- Digital safety inspections
- Bringing insight into your network
- Asphalt preservation systems
- The Local Highway Authority's perspective on asset management
- Open forum/Workshop
